REALKINETIC

YOUR POTENTIAL REALIZED

```
def my_func(*args, **kwargs):  
    logging.info("start")  
    analytics.store("my_func", "start")  
    do_something()  
    do_something_else()  
    do_another_thing()  
    logging.info("end")  
    analytics.store("my_func", "stop")
```

This is really slow and we don't  
know why so we start doing  
naive timing crap

```
def my_func(*args, **kwargs):  
    logging.info("start")  
    analytics.store("my_func", "start")  
    do_something()  
    do_something_else()  
    do_another_thing()  
    logging.info("end")  
    analytics.store("my_func", "stop")
```
