REALKINETIC

YOUR POTENTIAL REALIZED

```
def my_func(ctx, id, data):  
    my_thing = db.get(id)  
    my_thing.data = data  
    if ctx.request_type != REQUEST_TYPE.TRACE:  
        # Write to storage  
        my_thing.put()
```

More ideally we wrap our storage layer to use the flag

This looks like a feature flag

```
def my_func(ctx, id, data):  
    my_thing = db.get(id)  
    my_thing.data = data  
    if ctx.request_type != REQUEST_TYPE.TRACE:  
        # Write to storage  
        my_thing.put()
```

More ideally we wrap our storage layer to use the flag
